

Tool & Fabrication Sponsorship Proposal prepared for Industrial Plastics & Paints

To: Erin, [Industrial Plastics & Paints]

From: David Murphy, Team Leader, Chinook Project

Subject: Technical Partnership & Tool Sponsorship

Dear Erin,

The **Chinook Project** is currently developing a new standard for sustainable urban transport in Vancouver using advanced composite techniques. Because our "Hand-made Fabrication Method" relies heavily on industrial composites—including **System Three epoxy, carbon fiber, and heavy-wall heat shrink**—we view you as an essential technical partner.

1. THE OPPORTUNITY

We are requesting a **Technical Sponsorship** to assist with the procurement of specialized composite materials and tools for our first prototype. As a partner, your brand will be positioned at the forefront of this "Entrepreneur Initiative," which seeks to prove that world-class fabrication can be achieved using accessible local tools.

2. PARTNER BENEFITS

- **Case Study Participation:** We will provide detailed performance data and photos of [Company Name] products (e.g., System Three 1560) in a high-stress, real-world application (300kg payload).
- **Brand Placement:** Your logo will appear on all marketing flyers and technical manuals distributed to Vancouver tour operators.
- **Community Impact:** Your support directly enables a "Vancouver-grown" sustainable business model.

Sincerely,

David Murphy

Team Leader, Chinook Project
