

Partnership Proposal:

THE CHINOOK & ECM PCB Stator Tech

To: inquiries@pcbstator.com Cc: info@pcbstator.com From: David Murphy, Team Leader, Chinook Project
Subject: Partnership & Evaluation Kit Inquiry: THE CHINOOK 500W Vancouver Bamboo Rickshaw Project

Dear ECM PCB Stator Tech Team,

I am writing to formally propose a technology partnership between **THE CHINOOK** urban mobility project and **ECM PCB Stator Tech**. We are requesting a quote for a **PCB Stator Evaluation Kit** [YoutubePcbstator](#) as we move into the prototyping phase of our sustainable, high-performance pedicab designed for the Vancouver, BC market.

1. PROJECT OVERVIEW: THE CHINOOK

"The Chinook" is more than a rickshaw; it is a **high-performance, carbon-neutral vehicle** designed to bridge the gap between bicycles and cars. Built with a **14-layer laminated bamboo monocoque frame** reinforced with a unidirectional carbon fiber core, it achieves a strength-to-weight ratio up to 40% better than steel.

- **Social Mission:** Empowering local job seekers through sustainable urban tours and deliveries.
- **Engineering Philosophy:** "Overbuilt for Safety" with an artisanal finish, utilizing local Vancouver supply chains including **Coolite Bamboo** and **UBC Forestry**. [YelpUbc](#)

2. TECHNICAL SYNERGY & SPECIFICATIONS

Our project is uniquely positioned to showcase the benefits of your **70% lighter axial flux motor technology** [PcbstatorPcbstator](#) within the constraints of strict urban regulations.

- **Vancouver Power Cap:** Strict **500W continuous rating**. Bc Every gram of motor weight saved directly increases our hill-climbing torque and passenger payload capacity.
- **Electrical Stability:** We use a **48V Lead-Acid (Deep-Cycle AGM)** array. Canbat The high capacitance and low internal resistance of this system provide an exceptionally stable voltage environment, protecting your delicate PCB stator electronics from "spikey" regulation or transient damage. Batterycouncil
- **Chassis Design:** A streamlined, aerodynamic passenger canopy designed for the Pacific Northwest climate.

3. PARTNERSHIP & SCALING

We are seeking a **long-term technology partner** to help us redefine urban transit. Tphglobal

1. **"Our Designs" Transparency:** As a mission-driven project, we are developing a transparent "Build Guide." We would be honored to feature ECM as our **Official Stator Partner**, showcasing your tech to the DIY and sustainable transport communities. Academia
2. **Order Volume:** Following receipt of the evaluation sample and pending financing approval, we anticipate an initial production order of **10 units** to launch our first tour fleet.
3. **Prototyping Access:** We are in discussions with the **UBC Centre for Advanced Wood Processing (CAWP)** for build space and structural validation. [UbcTwigbc](#)

4. SUPPORTING DOCUMENTATION

Attached for your review is the **THE CHINOOK Information Kit** , which details our:

- **Marketing & Business Plan:** 6-month revenue forecasts and local partnership network.
- **Fabrication Manual:** Laminated bamboo methods and Finite Element Analysis (FEA) targets.
- **Design Intent:** High-resolution visuals of the chassis and canopy integration.

We believe your PCB Stator technology is the missing piece in creating the world's most efficient urban taxi. We look forward to discussing the next steps for an evaluation motor kit.

Sincerely,

David Murphy
